

# Contents

## 1 Function and history

Some basic definitions .....	1-1
Function .....	1-3
History .....	1-4
Front suspension .....	1-16
Rear suspension .....	1-23
Spring types .....	1-29
Load Compensation .....	1-30

## 2 Tyres

Weight support .....	2-2
Suspension action .....	2-4
Tyre stiffness or spring rate .....	2-8
Contact area .....	2-11
Area when cornering .....	2-15
Friction (grip) .....	2-15
Braking & driving .....	2-17
Cornering .....	2-17
Mechanisms of grip .....	2-17
Under- and over-steer .....	2-27
Construction .....	2-32
Materials .....	2-34
Summary .....	2-34

### 3 Geometric considerations

Basic motorcycle geometry .....	3-1
Trail .....	3-1
Rake or castor angle (steering axis inclination) .....	3-5
Wheelbase.....	3-15
Wheel diameter.....	3-16
Other considerations.....	3-18
Angular motions.....	3-22

### 4 Balance and steering

Balance.....	4-1
Steering .....	4-3
Gyroscopic effects only .....	4-9
Gyroscopic with tyre camber force only.....	4-12
Gyroscopic with tyre camber and steer forces.....	4-14
Tyre forces only – no gyroscopic effects. ....	4-18
Body lean only – no steering.....	4-20
Conclusions: .....	4-23

### 5 Aerodynamics

Drag.....	5-1
Evolution of the racing fairing.....	5-9
Internal air flow .....	5-10
Lift.....	5-11
Airflow evaluation.....	5-18
Side wind stability (traditional view).....	5-21
Steady state directional stability.....	5-24
Dynamic directional stability .....	5-28
Summary .....	5-31

## 6 Suspension principles

Springs .....	6-1
Damping .....	6-8
Sprung and unsprung mass .....	6-21
Basic suspension principles .....	6-21
Other factors .....	6-31
Lateral suspension.....	6-42
Summary .....	6-49

## 7 Front suspension

Head stock mounted forks .....	7-1
Alternatives to the head stock mounted fork.....	7-13
Hub centre steered .....	7-14
Double link.....	7-18
McPhearson strut based .....	7-27
Virtual steering axis.....	7-31

## 8 Rear suspension

Effective spring rate .....	8-3
Chain effects.....	8-11
Wheel trajectory.....	8-15
Structural .....	8-16
Single or dual sided .....	8-19
Summary .....	8-26

## 9 Squat and dive

Load transfer.....	9-1
Squat and dive.....	9-4
Shaft drive .....	9-4
Chain drive .....	9-13
Aerodynamic squat .....	9-25
Braking reaction (rear) .....	9-26
Dive (front).....	9-29
Dynamic effects .....	9-37
Summary .....	9-47

## 10 Structural considerations

Fatigue.....	10-1
Structural efficiency.....	10-1
Triangulation .....	10-2
Beam frames .....	10-5
Triangulated frames.....	10-9
Tubular backbone .....	10-11
Structural comparison .....	10-12
Fabricated backbone .....	10-14
Monocoque .....	10-15
Structural engine.....	10-17
Conventional multi-tubular .....	10-20
Twin-spar.....	10-23
Other types .....	10-27
Summary .....	10-28

## 11 Engine Mounting

## 12 Braking

The basics .....	12-1
Effects of CoG height.....	12-7
Generation of torque .....	12-9
Hardware .....	12-10
Discs.....	12-11
Calipers .....	12-14
Pads .....	12-15
Linked brakes .....	12-15
ABS .....	12-17

## 13 Materials and properties

Typical properties of some common materials .....	13-3
Frame .....	13-5
Wheels.....	13-8
Fuel tank.....	13-13
Brake discs .....	13-13
Bodywork.....	13-13

## 14 Stability & control

Under-/over-steer.....	14-2
High-siding.....	14-7
Stability under braking .....	14-9
Instabilities .....	14-10
Damping .....	14-14

## 15 Performance measurement

Track side .....	15-1
Laboratory .....	15-9
Strength analysis .....	15-9
Measurement and simulation .....	15-12
Future development.....	15-14

## 16 Practical frame building

Welding.....	16-1
Distortion .....	16-3
Gussets .....	16-5
Jigging .....	16-6
Tube profiling.....	16-8
Tube types.....	16-9
Tube sizes .....	16-10
Frame finishes .....	16-11
Design layout.....	16-12

## 17 Case study

Measurement.....	17-2
Main frame.....	17-2
Engine mounting.....	17-5
Results.....	17-5
Material.....	17-5
Swing arm.....	17-5
Forks .....	17-6
Caution .....	17-6
Tuning.....	17-6

## 18 Future developments

The status quo .....	18-1
Future possibilities .....	18-2
Active suspension.....	18-2
Rheological Fluids.....	18-4
Two wheel drive (2WD).....	18-4
Two wheel steering (2WS) .....	18-8
Feet-Forward motorcycles. (FF).....	18-12

# Appendices

## A1 Experiments with rake and trail

Rake .....	A1-1
Trail .....	A1-7
Conclusions .....	A1-8
Post script.....	A1-8

## A2 Glossary of terms

## A3 Units conversion

## A4 Gyroscopic effects

## A5 Basic physics of motorcycles

Basic Trigonometry.....	A5-1
Units of angle.....	A5-2
Velocity .....	A5-3
Acceleration .....	A5-4
Mass.....	A5-4
Momentum.....	A5-5
Newton's laws.....	A5-6
Force and weight .....	A5-7
Moments, couples and torque.....	A5-8
Centripetal & centrifugal force.....	A5-9
Addition and resolution of velocities and forces.....	A5-10
Work, energy and power .....	A5-12
Nomenclature and sign conventions .....	A5-13
Normalization.....	A5-14

## A6 Analysis of mechanisms

## A7 CoG and mass distribution of rider

## A8 Typical data

**Notes.**
